

1965-1970 CADILLAC REAR BRACKETS

1. Raise & support the vehicle at a safe and comfortable working height.

2. Support the axle then remove coil spring and shock, refer to service manual for disassembly procedure.

3. To allow the airbag to sit flat on top of the axle mount, the coil spring retainer must be cut down to less than 3/16" tall (fig 1).

4. Place the 4 1/2" washer on top of the coil spring pocket, between the frame and the body (fig 2).

5. Mount the airbag to the upper cup then screw the all thread into upper cup. Mount upper cup in the spring pocket.

6. Place the 7" Roll Plate on the top of cut down spring retainer, then put the square plate on bottom and secure airbag as shown (fig 3).
